Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,

```
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT p40 subunit protein and a nucleic acid linker, useful in preparing a
PT vaccine against infectious diseases in feline animals.
XX
PS Claim 23; SEQ ID NO 32; 103pp; English.
XX
CC The present invention relates to the feline interleukin (IL)-12p35 or p40
CC subunit protein and their encoding nucleic acid molecules and a nucleic
CC acid linker. The invention also provides the feline caspase (casp)-1,
CC feline IL-18 single chain and canine IL-12 single chain proteins and
CC their nucleic acid molecules. The nucleic acid molecule is useful in
CC preparing a vaccine against infectious diseases in feline animals. The
CC present sequence is the feline single chain IL-12p35 subunit protein
CC encoding full-length cDNA.

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 3; SEQ ID NO 34; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12p35 subunit full-length
CC   complementary DNA.

PT   Novel feline cytokine protein - useful for treating feline auto:immune
PT   diseases, e.g. those caused by feline herpes virus or feline calcivirus.
XX
PS   Claim 22; Page 57-58; 94pp; Japanese.
XX
CC   This sequence encodes a novel feline cytokine protein, FLAFp35. This
CC   protein can be used in the production of a FLAFp35/FLAFp40 heterodimer
CC   which can potentiate the cytotoxic activity of feline cytotoxic T
CC   lymphocyte cells. Such proteins are used for treatment of feline
CC   autoimmune diseases e.g. as caused by feline herpes virus or feline
CC   calcivirus

PT   Recombinant feline interleukin-12, useful as immunostimulant and for
PT   treating e.g. viral infections in cats, and related nucleic acid
PT   constructs.
XX
PS   Disclosure; Fig 2; 35pp; German.
XX
CC   This invention describes a novel feline interleukin-12 (fIL-12)
CC   polypeptide (I) that is expressed, by recombinant gene expression in
CC   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC   of subunits p35 and p40. These proteins are formed so that, in equimolar
CC   concentrations and in presence of an immunizing antigen, they can be
CC   administered to carnivores, particularly domestic cats. The invention
CC   also describes a nucleic acid construct (II) encoding fIL-12 containing
CC   sequences at least 95% identical with the p40- and p35-encoding sequences
CC   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC   as immunostimulants for immunization against infectious diseases and/or
CC   for treating infections or tumors in felines, especially domestic cats.
CC   The products of the invention have immunostimulatory, antiviral and
CC   antitumor activity. Nucleic acid constructs that encode (II) are useful
CC   as adjuvants for prophylactic immunization against viral diseases and for
CC   treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC   of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC   is useful for carnivores, and particularly domestic cats in the
CC   following: (i) as immunostimulant, for preventative or therapeutic use;
CC   and (ii) treating tumors and autoimmune diseases, or diseases associated
CC   with a Th1 defect, especially pre-existing infections by feline immune
CC   deficiency virus (FIV), feline leukemia virus and corona virus

PT   Vaccine for treating or preventing lentivirus infection in cats, contains
PT   nucleic acid sequence encoding viral protein under control of eukaryotic
PT   promoter.
XX
PS   Claim 14; Page 37; 37pp; German.
XX
CC   This invention describes a novel vaccine (A) for prevention or treatment
CC   of lentivirus infection in felines which comprises an immunizing nucleic
CC   acid sequence (I) that contains, or comprises, at least part of a gene
CC   encoding a protein (II) of the virus, under control of a eukaryotic
CC   promoter functional in the relevant animal. (II) is especially the
CC   envelope (env) protein. The invention also describes (1) vaccine (A)
CC   containing an immunizing protein, or fragment, from a lentivirus plus at
CC   least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
CC   lentivirus protein, or fragment, especially derived from feline immune
CC   deficiency virus (FIV), by expressing the corresponding nucleic acid
CC   sequence in a host cell. The products of the invention have antiviral
CC   activity. The vaccine (A) and related protein-based vaccines, are
CC   particularly used to treat or prevent lentivirus infections in domestic
CC   cats, especially feline immune deficiency virus (FIV). Vaccination with
CC   (A) allows differentiation between vaccinated and infected animals, from
CC   the antibody status. The vaccines may be formulated with an adjuvant
CC   (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
CC   immune response, particularly a Th1 response

PT Recombinant feline interleukin-12, useful as immunostimulant and for
PT treating e.g. viral infections in cats, and related nucleic acid
PT constructs.
XX
PS Claim 3; Page 31; 35pp; German.
XX
CC This invention describes a novel feline interleukin-12 (fIL-12)
CC polypeptide (I) that is expressed, by recombinant gene expression in
CC eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC of subunits p35 and p40. These proteins are formed so that, in equimolar
CC concentrations and in presence of an immunizing antigen, they can be
CC administered to carnivores, particularly domestic cats. The invention
CC also describes a nucleic acid construct (II) encoding fIL-12 containing
CC sequences at least 95% identical with the p40- and p35-encoding sequences
CC (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC as immunostimulants for immunization against infectious diseases and/or
CC for treating infections or tumors in felines, especially domestic cats.
CC The products of the invention have immunostimulatory, antiviral and
CC antitumor activity. Nucleic acid constructs that encode (II) are useful
CC as adjuvants for prophylactic immunization against viral diseases and for
CC treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC is useful for carnivores, and particularly domestic cats in the
CC following: (i) as immunostimulant, for preventative or therapeutic use;
CC and (ii) treating tumors and autoimmune diseases, or diseases associated
CC with a Th1 defect, especially pre-existing infections by feline immune
CC deficiency virus (FIV), feline leukemia virus and corona virus

PT Vaccine for treating or preventing lentivirus infection in cats, contains
PT nucleic acid sequence encoding viral protein under control of eukaryotic
PT promoter.
XX
PS Disclosure; Page 31-33; 37pp; German.
XX
CC This invention describes a novel vaccine (A) for prevention or treatment
CC of lentivirus infection in felines which comprises an immunizing nucleic
CC acid sequence (I) that contains, or comprises, at least part of a gene
CC encoding a protein (II) of the virus, under control of a eukaryotic
CC promoter functional in the relevant animal. (II) is especially the
CC envelope (env) protein. The invention also describes (1) vaccine (A)
CC containing an immunizing protein, or fragment, from a lentivirus plus at
CC least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
CC lentivirus protein, or fragment, especially derived from feline immune
CC deficiency virus (FIV), by expressing the corresponding nucleic acid
CC sequence in a host cell. The products of the invention have antiviral

```
CC   activity. The vaccine (A) and related protein-based vaccines, are
CC   particularly used to treat or prevent lentivirus infections in domestic
CC   cats, especially feline immune deficiency virus (FIV). Vaccination with
CC   (A) allows differentiation between vaccinated and infected animals, from
CC   the antibody status. The vaccines may be formulated with an adjuvant
CC   (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
CC   immune response, particularly a Th1 response

PT   Canine interleukin 12 - comprises P40 and P35 subunits; useful in
PT   veterinary medicine, e.g. antitumour, antivirus and vaccine adjuvant
PT   activities are expected.
XX
PS   Claim 11; Page 11-12; 12pp; Japanese.
XX
CC   The present sequence encodes a canine interleukin-12 (IL-12) P35 subunit.
CC   A canine IL-12 comprising a P40 and P35 subunit is capable of inducing an
CC   antiviral activating factor and the expression of class II MHC molecules
CC   in canine tumour cells, stimulating proliferation of canine blastogenic
CC   lymphocytes and activating canine leukocytes to inhibit canine tumour
CC   cells. The canine IL-12 can be used in veterinary medicines, e.g.
CC   antitumour, antivirus and vaccine adjuvant activities are expected

XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a canine interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 4; SEQ ID NO 48; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the canine single chain IL-12p35 subunit full-length
CC   complementary DNA.

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 4; SEQ ID NO 46; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the canine single chain IL-12p35 subunit protein
CC   encoding full-length cDNA.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/clone_lib="UI-R-C0"
/note="Vector: pT7T3D-PacI; Site_1: Not I; Site_2: Eco RI; The UI-R-C0 library is a subtracted library derived from the UI-R-A1 and UI-R-E1 libraries. The UI-R-A1 library consisted of a mixture of individually tagged normalized libraries constructed from rat placenta, adult lung, brain, liver, kidney, heart, spleen, ovary, and muscle. The UI-R-E1 library consisted of a mixture of individually tagged normalized libraries constructed from 8, 12 and 18-day embryo. The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dT track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-C0) was constructed as follows: PCR amplified cDNA inserts from a pool of UI-R-A1 and UI-R-E1 clones from which 3' ESTs had been derived was used as a driver in a hybridization with the pooled UI-R-A1 and UI-R-E1 library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (Life Technologies) to generate the UI-R-C0 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6: 791-806, 1996)"

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain

```
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT p40 subunit protein and a nucleic acid linker, useful in preparing a
PT vaccine against infectious diseases in feline animals.
XX
PS Example 3; SEQ ID NO 45; 103pp; English.
XX
CC The present invention relates to the feline interleukin (IL)-12p35 or p40
CC subunit protein and their encoding nucleic acid molecules and a nucleic

```
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12 complementary DNA.

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 24; SEQ ID NO 43; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12 protein encoding cDNA.

XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 24; SEQ ID NO 38; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12 protein encoding cDNA.

PT Novel feline cytokine protein - useful for treating feline auto:immune
PT diseases, e.g. those caused by feline herpes virus or feline calcivirus.
XX
PS Claim 20; Page 55; 94pp; Japanese.
XX
CC This sequence encodes a novel feline cytokine mature protein, FLAFp40.
CC This protein can be used in the production of a FLAFp35/FLAFp40
CC heterodimer which can potentiate the cytotoxic activity of feline
CC cytotoxic T lymphocyte cells. Such proteins are used for treatment of
CC feline autoimmune diseases e.g. as caused by feline herpes virus or
CC feline calcivirus

PS   Claim 1; Page 51-53; 106pp; English.
XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

```

loxP-HindIII; Clones from this library have been PCR-amplified using gene-specific primers to contain the complete open reading frame (based on known gene sequences available from NCBI's RefSeq). Template for PCR is cDNA derived from either pooled cytoplasmic polyA RNA from 30 cells lines or pooled total RNA from 10 different tissues (from BD Biosciences/Clontech and Washington University). PCR products are directionally cloned into the loxP sites of the pDNR-Dual vector. Library constructed by Dr. Narayan Bhat, Earl Bere III and Hongling Liao (Gene Expression Laboratory, Research Technology Program, SAIC Frederick, NCI-Frederick, Frederick, MD 21702). For information on which gene each clone represents, please visit our anonymous ftp site at ftp://image.llnl.gov/image/rearrayed_plates/IRBK.preSV.dat a Note: this is a NIH_MGC Library."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

            Email: kersli@genome.wi.mit.edu
            Primer A: No sequence submitted
            Primer B: No sequence submitted
            STS size: 621
            Protocol:
            WGS-discovery (WGS):
            Paired-end low-coverage whole genome shotgun reads were generated
            from 9 breeds
            (German Shepherd, Rottweiler, Bedlington Terrier, Beagle, Labrador
            Retriever, English
            Shepherd, Italian Greyhound, Alaskan Malamute and the Portuguese
            Water Dog -100,000 each)
            and five other canids (Chinese, Alaskan, Indian and Spanish Gray
            Wolf as well as the
            Californian Coyote).
            The WGS reads were placed uniquely on the CanFam1.0 boxer assembly
            and SNP detection was
            carried out by SSAHA-SNP. 863872 reads were annotated as STSs and
            485941 SNPs were
            annotated with alleles from the boxer and the breed or canid from
            which the particular
            read came. The validation rate for these SNPs was estimated at
            approximately 98%.
            WGA-discovery (WGA) of Boxer/Poodle SNPs:
            A second set of SNPs was generated using a similar methodology
            except that the contigs
            from the 1.5x poodle assembly (Kirkness 2003) were used instead of
            WGS reads. Since this
            sequence lacked base quality scores, arbitrary quality scores of
            phred 40 were assigned
            before the poddle seqeunce was placed uniquely on the CanFam1.0
            boxer assembly and SNP
            detection was carried out by SSAHA-SNP. 1637780 SNPs were annotated
            with alleles from the
            boxer and the poodle. The validation rate for these SNPs was
            estimated at approximately TBD%.
            Internal-WGA-discovery (I-WGA):
            A third set of SNPs were discovered by comparing reads in the WGA
            assembly. SNPs were
            defined as mismatch positions that had a base quality of >= 30 on
            both reads in a region
            that aligned without gaps, and with at most one additional mismatch
            in the ten flanking
            bases. For each allele, at least one additional read had to confirm
            it. 731476 SNPs were
            annotated with alleles between the two boxer alleles. The
            validation rate for these SNPs
            was estimated at approximately TBD%.

PT   Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
PT   chain and canine IL-12 single chain proteins, useful for treating and
PT   preventing autoimmune diseases, inflammatory diseases and/or graft
PT   rejection in animals.
XX
PS   Claim 1; Page 49-50; 106pp; English.
XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
PT   chain and canine IL-12 single chain proteins, useful for treating and
PT   preventing autoimmune diseases, inflammatory diseases and/or graft
PT   rejection in animals.
XX
PS   Disclosure; Page 51; 106pp; English.
XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 3; SEQ ID NO 28; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain mature IL-12p40 subunit
CC   complementary DNA.

PT   Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
PT   chain and canine IL-12 single chain proteins, useful for treating and
PT   preventing autoimmune diseases, inflammatory diseases and/or graft
PT   rejection in animals.
XX
PS   Claim 6; Page 66-67; 106pp; English.
XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12 protein encoding cDNA.

CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 24; SEQ ID NO 38; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12 protein encoding cDNA.

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 3; SEQ ID NO 40; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12 complementary DNA.

PS   Claim 20; Page 55; 94pp; Japanese.
XX
```

```
CC   This sequence encodes a novel feline cytokine mature protein, FLAFp40.
CC   This protein can be used in the production of a FLAFp35/FLAFp40
CC   heterodimer which can potentiate the cytotoxic activity of feline
CC   cytotoxic T lymphocyte cells. Such proteins are used for treatment of
CC   feline autoimmune diseases e.g. as caused by feline herpes virus or
CC   feline calcivirus

XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
PT   chain and canine IL-12 single chain proteins, useful for treating and
PT   preventing autoimmune diseases, inflammatory diseases and/or graft
PT   rejection in animals.
XX
PS   Example 3; Page 54; 106pp; English.
XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 23; SEQ ID NO 29; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12p40 subunit protein
CC   encoding full-length cDNA.

PT   Novel feline cytokine protein - useful for treating feline auto:immune
PT   diseases, e.g. those caused by feline herpes virus or feline calcivirus.
XX
PS   Claim 19; Page 52-54; 94pp; Japanese.
XX
CC   This sequence encodes a novel feline cytokine protein, FLAFp40. This
CC   protein can be used in the production of a FLAFp35/FLAFp40 heterodimer
CC   which can potentiate the cytotoxic activity of feline cytotoxic T
CC   lymphocyte cells. Such proteins are used for treatment of feline
CC   autoimmune diseases e.g. as caused by feline herpes virus or feline
CC   calcivirus

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 24; SEQ ID NO 55; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline N-terminal single chain IL-12p40 protein
CC   encoding cDNA.

PT   Novel feline cytokine protein - useful for treating feline auto:immune
PT   diseases, e.g. those caused by feline herpes virus or feline calcivirus.
XX
PS   Claim 21; Page 56-57; 94pp; Japanese.
XX
CC   This sequence encodes a novel feline cytokine mature protein, FLAFp40.
CC   This protein can be used in the production of a FLAFp35/FLAFp40
CC   heterodimer which can potentiate the cytotoxic activity of feline
CC   cytotoxic T lymphocyte cells. Such proteins are used for treatment of
CC   feline autoimmune diseases e.g. as caused by feline herpes virus or
CC   feline calcivirus

PT   Vaccine for treating or preventing lentivirus infection in cats, contains
PT   nucleic acid sequence encoding viral protein under control of eukaryotic
PT   promoter.
XX
PS   Claim 14; Page 36; 37pp; German.
XX
CC   This invention describes a novel vaccine (A) for prevention or treatment
CC   of lentivirus infection in felines which comprises an immunizing nucleic
CC   acid sequence (I) that contains, or comprises, at least part of a gene
CC   encoding a protein (II) of the virus, under control of a eukaryotic
CC   promoter functional in the relevant animal. (II) is especially the
CC   envelope (env) protein. The invention also describes (1) vaccine (A)
CC   containing an immunizing protein, or fragment, from a lentivirus plus at
CC   least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
CC   lentivirus protein, or fragment, especially derived from feline immune
CC   deficiency virus (FIV), by expressing the corresponding nucleic acid
CC   sequence in a host cell. The products of the invention have antiviral
CC   activity. The vaccine (A) and related protein-based vaccines, are
CC   particularly used to treat or prevent lentivirus infections in domestic
CC   cats, especially feline immune deficiency virus (FIV). Vaccination with
CC   (A) allows differentiation between vaccinated and infected animals, from
CC   the antibody status. The vaccines may be formulated with an adjuvant
CC   (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
CC   immune response, particularly a Th1 response

PT   Recombinant feline interleukin-12, useful as immunostimulant and for
PT   treating e.g. viral infections in cats, and related nucleic acid
PT   constructs.
XX
PS   Claim 3; Page 30; 35pp; German.
XX
CC   This invention describes a novel feline interleukin-12 (fIL-12)
CC   polypeptide (I) that is expressed, by recombinant gene expression in
CC   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC   of subunits p35 and p40. These proteins are formed so that, in equimolar
CC   concentrations and in presence of an immunizing antigen, they can be
CC   administered to carnivores, particularly domestic cats. The invention
CC   also describes a nucleic acid construct (II) encoding fIL-12 containing
CC   sequences at least 95% identical with the p40- and p35-encoding sequences
```

```
CC   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC   as immunostimulants for immunization against infectious diseases and/or
CC   for treating infections or tumors in felines, especially domestic cats.
CC   The products of the invention have immunostimulatory, antiviral and
CC   antitumor activity. Nucleic acid constructs that encode (II) are useful
CC   as adjuvants for prophylactic immunization against viral diseases and for
CC   treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC   of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC   is useful for carnivores, and particularly domestic cats in the
CC   following: (i) as immunostimulant, for preventative or therapeutic use;
CC   and (ii) treating tumors and autoimmune diseases, or diseases associated
CC   with a Th1 defect, especially pre-existing infections by feline immune
CC   deficiency virus (FIV), feline leukemia virus and corona virus

PT   Recombinant feline interleukin-12, useful as immunostimulant and for
PT   treating e.g. viral infections in cats, and related nucleic acid
PT   constructs.
XX
PS   Example 1c; Page 33-35; 35pp; German.
XX
CC   This invention describes a novel feline interleukin-12 (fIL-12)
CC   polypeptide (I) that is expressed, by recombinant gene expression in
CC   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC   of subunits p35 and p40. These proteins are formed so that, in equimolar
CC   concentrations and in presence of an immunizing antigen, they can be
CC   administered to carnivores, particularly domestic cats. The invention
CC   also describes a nucleic acid construct (II) encoding fIL-12 containing
CC   sequences at least 95% identical with the p40- and p35-encoding sequences
CC   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC   as immunostimulants for immunization against infectious diseases and/or
CC   for treating infections or tumors in felines, especially domestic cats.
CC   The products of the invention have immunostimulatory, antiviral and
CC   antitumor activity. Nucleic acid constructs that encode (II) are useful
CC   as adjuvants for prophylactic immunization against viral diseases and for
CC   treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC   of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC   is useful for carnivores, and particularly domestic cats in the
CC   following: (i) as immunostimulant, for preventative or therapeutic use;
CC   and (ii) treating tumors and autoimmune diseases, or diseases associated
CC   with a Th1 defect, especially pre-existing infections by feline immune
CC   deficiency virus (FIV), feline leukemia virus and corona virus

PT   Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40
PT   and p35 polypeptides), useful for treating various diseases e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Claim 1; Page 137-138; 223pp; English.
XX
CC   The invention relates to nucleic acids encoding modified cytokine
CC   polypeptides (i.e. modified p40 and p35 polypeptides). The modified
CC   cytokine polypeptides have T-cell proliferative and interferon (IFN)-
CC   gamma induction activities. The polypeptides and polynucleotides of the
CC   invention are useful for treating various diseases e.g. bacterial
CC   infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
CC   polynucleotide may also be useful as a vaccine adjuvant, to enhance a
CC   vaccinated host's cell-mediated immunity for protective response to a
CC   pathogen. The present sequence is a modified human p40 protein encoding
CC   DNA

XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the canine single chain IL-12p40 subunit reverse
CC   complementary DNA.

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 4; SEQ ID NO 52; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the canine single chain IL-12p40 subunit protein
CC   encoding cDNA.

PT   Canine cytokine protein which activates canine cytotoxic T lymphocytes -
PT   is useful for treatment of viral and autoimmune diseases in dogs.
XX
PS   Claim 8; Page 32; 51pp; Japanese.
XX
CC   This sequence encodes the canine lymphocyte activation factor (CLAF) of
CC   the invention. CLAF activates lymphocytes, especially canine cytotoxic T
CC   cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies
CC   recognising it may be used in the treatment of viral diseases in dogs
CC   (such as canine distemper, canine parvovirus and canine infectious
CC   hepatitis). The antibodies may also be used in isolation of CLAF from
CC   culture of the transformant host cells by affinity chromatography. The
CC   p40 homodimer can be used for the treatment of autoimmune diseases in
CC   dogs

PT   Large scale production of interleukin-12 for pharmaceutical applications,
PT   comprises infecting an insect cell with a recombinant virus containing
PT   gene encoding IL-12, and producing IL-12 by carrying out spinner culture
PT   of insect cell.
XX
PS   Example; SEQ ID NO 3; 8pp; Japanese.
XX
CC   The invention related to the large scale production of interleukin-12 (IL
CC   -12), which involves infecting an insect cell with a recombinant virus
CC   containing a gene encoding IL-12, and producing IL-12 by carrying out
CC   spinner culture of insect cell. The method is useful for producing IL-12,
CC   preferably canine IL-12. IL-12 has pharmaceutical applications. The
CC   present sequence encodes canine IL-12 P40, which is used in the
CC   exemplification of the present invention.

PT   rejection in animals.
XX
PS   Claim 6; Page 83-85; 106pp; English.
XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a canine interleukin 12 DNA sequence, as described in
CC   the invention

PT   Canine cytokine protein which activates canine cytotoxic T lymphocytes -
PT   is useful for treatment of viral and autoimmune diseases in dogs.
XX
PS   Claim 8; Page 30-31; 51pp; Japanese.
XX
CC   This sequence encodes the canine lymphocyte activation factor (CLAF) of
CC   the invention. CLAF activates lymphocytes, especially canine cytotoxic T
CC   cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies
CC   recognising it may be used in the treatment of viral diseases in dogs
CC   (such as canine distemper, canine parvovirus and canine infectious
CC   hepatitis). The antibodies may also be used in isolation of CLAF from
CC   culture of the transformant host cells by affinity chromatography. The
CC   p40 homodimer can be used for the treatment of autoimmune diseases in
CC   dogs

CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a canine interleukin 12 DNA sequence, as described in
CC   the invention

PT   Novel gene vector for expression in insect useful for expression of
PT   foreign gene such as dog interleukin 12 gene, comprises two promoters.
XX
PS   Claim 4; SEQ ID NO 5; 13pp; Japanese.
XX
CC   The invention relates to a novel gene vector for expression in an insect
CC   comprising at least two promoters, particularly the polyhedrin promoter
CC   and p10 promoter. The vector contains at least two types of foreign
CC   protein expression gene and the gene product of the vector is produced
CC   using a gene recombinant baculovirus, particularly a recombinant silkworm
CC   nuclear polyhedrosis virus. The baculovirus is proliferated in a
CC   silkworm. The vector of the invention may be useful for expression of a
CC   foreign gene, such as canine interleukin 12. Within the vector, two types
CC   of foreign protein expression genes are integrated simultaneously for
CC   their simultaneous expression. The current sequence is that of the canine
CC   interleukin-12 (IL-12) p40 DNA of the invention.

CC   The natural CLMF protein is a 75 kD heterodimer comprising two
CC   polypeptide subunits, a 40 kD and a 35 kD subunit (AAQ12150). The
CC   subunits are bonded together via one or more disulfide bonds. The CLMF
CC   can interact with IL-2 to synergistically induce the cytolytic activity
CC   of Lymphokine Activated Killer (LAK) cells. It is also capable of
CC   stimulating T-cell growth. It can be used for the prepn. of LAK- and T-
CC   cell activator and antitumour compsns. and for stimulating Natural Killer
CC   (NK) cells

PT   Nucleic acid encoding ovine interleukin-5 or -12 - used as vaccine
PT   adjuvants and to treat or prevent microbial infections in livestock.
XX
PS   Claim 10; Page 49-51; 78pp; English.
XX
CC   The sequences given in AAT50757-59 encode ovine interleukin-12 (IL-12) 35
CC   kD subunit (partial and full length sequence) and the 40 kD subunit.
CC   Ovine IL-5 or IL-12 are used to treat and/or prevent infections in
CC   livestock (esp. cows and sheep), particularly where the animals are
CC   stressed, e.g. during transport. IL-5 and IL-12 can also be used as
CC   adjuvants in vaccines for veterinary use (partic. weakly immunogenic
CC   subunit or synthetic peptide vaccines). They may also be used to treat
CC   cancer, immunosuppression and allergy, to enhance/suppress the
CC   reproductive system and to promote growth or early maturity. Optionally
CC   interleukin can be delivered from constructs or delivery cells and
CC   antibodies are useful in enzyme immunoassays for rapid diagnosis of
CC   infection. The interleukins are immunopotentiators, especially IL-5
CC   promotes growth of early haematopoietic progenitor cells and generation
CC   of cytotoxic cells from thymocytes, also it stimulates production and
CC   secretion of IgM and IgA (in synergism with bacterial endotoxin). IL-12
CC   induces production of gamma-interferon by, and proliferation of, T and NK
CC   cells and increases the (non-)specific cytolytic lymphocyte response. The
CC   genetic constructs can also be used for in vitro production of IL-5 or -
CC   12. (Updated on 17-OCT-2003 to standardise OS field)

PT   Novel protein comprising cytotoxic lymphocyte maturation factor in
PT   substantially pure form or protein which exhibits cytotoxic lymphocyte
PT   maturation factor activity, useful as antitumor and immunoenhancing
PT   agent.
XX
PS   Claim 17; Page 28-29; 74pp; English.
XX
CC   The invention relates to a protein which comprises a cytotoxic lymphocyte
CC   maturation factor (CLMF). The protein is useful for stimulating activated
CC   T-cells which involves treating T-cells with the protein. The method
CC   further involves treating the activated T-cells with IL2 or its
CC   biologically active fragment. The protein is useful for stimulating
CC   natural killer cells which involves treating the natural killer cells
CC   with the protein. The protein has immunoenhancing and antitumour effects
CC   when used as single therapeutic agent in vivo. The present sequence is
CC   used in the exemplification of the present invention.

XX
PT   Method for efficiently expressing recombinant human interleukin 12 in
PT   eukaryotic cell.
XX
PS   Example 2; SEQ ID NO 2; 14pp; Chinese.
XX
CC   The invention describes the process of producing human recombinant
CC   interleukin-12 (IL-12) includes: providing a nucleotide sequence
CC   corresponding to the P35 subunit with the first signal peptide and a
CC   nucleotide sequence corresponding to the P40 subunit; inserting the
CC   nucleotide sequences into an expression vector; converting the eukaryotic
CC   cell with the expression vector; and culturing the transfected eukaryotic
CC   cell in condition suitable for recombinant human IL-12 expression. The
CC   process balances the expression amount of both P35 and P40 subunits and
CC   thus raises the expression amount of IL-12 with bioactivity via raising
CC   the expression strength of P35 subunit. This sequence represents the
CC   human interleukin-12 (IL-12) P40 subunit polynucleotide.

CC AAQ97484 and AAQ97485 are from human lymphoblast cell line RMPI 8866. IL-
CC 12 is a heterodimeric cytokine which was originally identified as a
CC factor which induces gamma-interferon from T cells and natural killer
CC cells as set forth in PCT/US91/06332, published April 2 1992, and
CC incorporated by reference. EP 433827, published June 26 1991, disclosed
CC IL-12 as a cytotoxin lymphocyte maturation factor. In the patent, IL-12
CC is defined as a heterodimeric glycoprotein comprised of two covalently
CC linked subunits having mol. wts of about 40 kD and 35 kD. The two
CC subunits may be disulfide-bonded. IL-12 is administered to prevent or
CC ameliorate GVHD. Dosage is 1 ng-0.1 mg (esp. 1.0 ng-1 microg)/kg daily
CC for 3 days, the first dose given 1 hr. after transplant. IL-12 can be
CC used as the native heterodimer or as subunits. (Updated on 25-MAR-2003 to
CC correct PN field.)

PT Therapy of graft-versus-host disease - by administration of interleukin-
PT 12 to maintain and/or promote graft-versus-leukaemia effects.
XX
PS Disclosure; Col 17-20; 20pp; English.
XX
CC The invention relates to a method for the treatment or prevention of
CC graft-versus-host disease (GVHD) which comprises the administration of
CC interleukin-12 (IL-12) at the time of bone-marrow transplantation to
CC maintain or promote graft-versus-leukaemia effects. Preferably, dosage is
CC 0.001-100 (preferably 1-100) mu g/kg for 3 days starting on the day of
CC the bone marrow transplant. IL-12 is administered daily until there is an
CC improvement in the condition. Administration is oral, cutaneous,
CC subcutaneous, intravenous or by inhalation preferably subcutaneous, or
CC intravenous. The present sequence encodes the human interleukin-12 40kDa
CC subunit

PT   Use of immunodeficient mice comprising human cells - particularly
PT   SCTD/beige mice comprising human immune cells for evaluating vaccines
PT   against cancers or human pathogens, e.g. HIV.
XX
PS   Example 10(c)(i); Page 110; 154pp; English.
XX
CC   Immunodeficient mice comprising human cells can be used for exposure to
CC   human pathogens and/or their components or human tumour cells and human
CC   peripheral blood lymphocytes. Also claimed is a vaccine comprising a cell
CC   modified to express an antigen and an immune-modulating protein, this is
CC   preferably an expression vector comprising a polynucleotide sequence that
CC   encodes the antigen and immune-modulating protein. Such vectors can be
CC   used to treat a subject having a tumour by transferring the expression
CC   vector into the tumour so that the antigen and the immune-modulator are
CC   expressed by at least the tumour. The methods can be used for producing
CC   and evaluating vaccines including cancer vaccines and vaccines directed
CC   against human pathogens, e.g. HIV, Leishmania, Mycobacterium, Listeria or
CC   Plasmodium. Two primers (AAV83197, AAV83198) were used to amplify the IL-
CC   12B for insertion into expression vectors of the invention

PT   Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40
PT   and p35 polypeptides), useful for treating various diseases e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Claim 5; Page 142; 223pp; English.
XX
CC   The invention relates to nucleic acids encoding modified cytokine
CC   polypeptides (i.e. modified p40 and p35 polypeptides). The modified
CC   cytokine polypeptides have T-cell proliferative and interferon (IFN)-
CC   gamma induction activities. The polypeptides and polynucleotides of the
CC   invention are useful for treating various diseases e.g. bacterial
CC   infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
CC   polynucleotide may also be useful as a vaccine adjuvant, to enhance a
CC   vaccinated host's cell-mediated immunity for protective response to a
CC   pathogen. The present sequence is human p40 protein encoding DNA

PS   Claim 5; Fig 7; 17pp; Chinese.
XX
CC   The invention relates to a recombinant baculovirus comprising DNA
CC   encoding human interleukin 12 (hIL-12) and methods for its preparation.
CC   The recombinant baculovirus strain is designated Autographa california
CC   nuclear polyhedrosis virus AcNPV-hIL12 (CCTCC No. 2 V200108). This strain
CC   contains two human IL-12 subunit genes, the IL-12 P35 subunit gene
CC   (ACC47589) and the IL-12 P40 subunit gene (ACC47592) which are
CC   respectively under the control of the viral polyhedrin and P10 promoters.
CC   The baculovirus can be used in the recombinant production of human IL-12
CC   which is suitable for treating tumours and bacterial, viral and other
CC   infections. The present sequence represents the human IL-12 P40 subunit
CC   gene used in construction of the baculovirus vector of the invention
